TITLE :INNOVATION

Creating an AI-based diabetes prediction system is a valuable and innovative project that can have a significant positive impact on healthcare. Such a system can help in early diagnosis and management of diabetes, potentially reducing its complications.

01

AI Based Diabetes Prediction System

1) Project Scope and Objectives:

2) Data Collection

3) Data Preprocessing

4) Feature Selection and Engineering

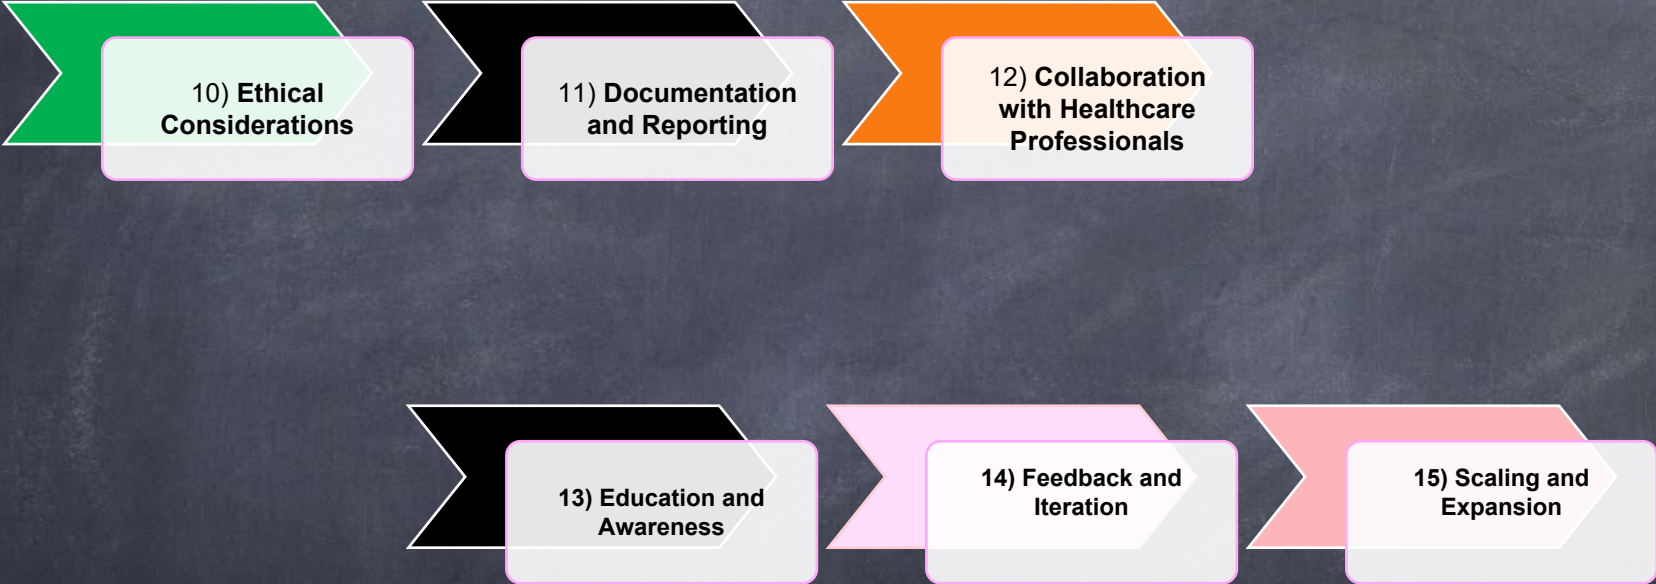

5) Model Selection

6) Model Training

7) Model Evaluation

8) Deployment

9) Monitoring and Maintenance

**10) Ethical
Considerations**

**11) Documentation
and Reporting**

**12) Collaboration
with Healthcare
Professionals**

**13) Education and
Awareness**

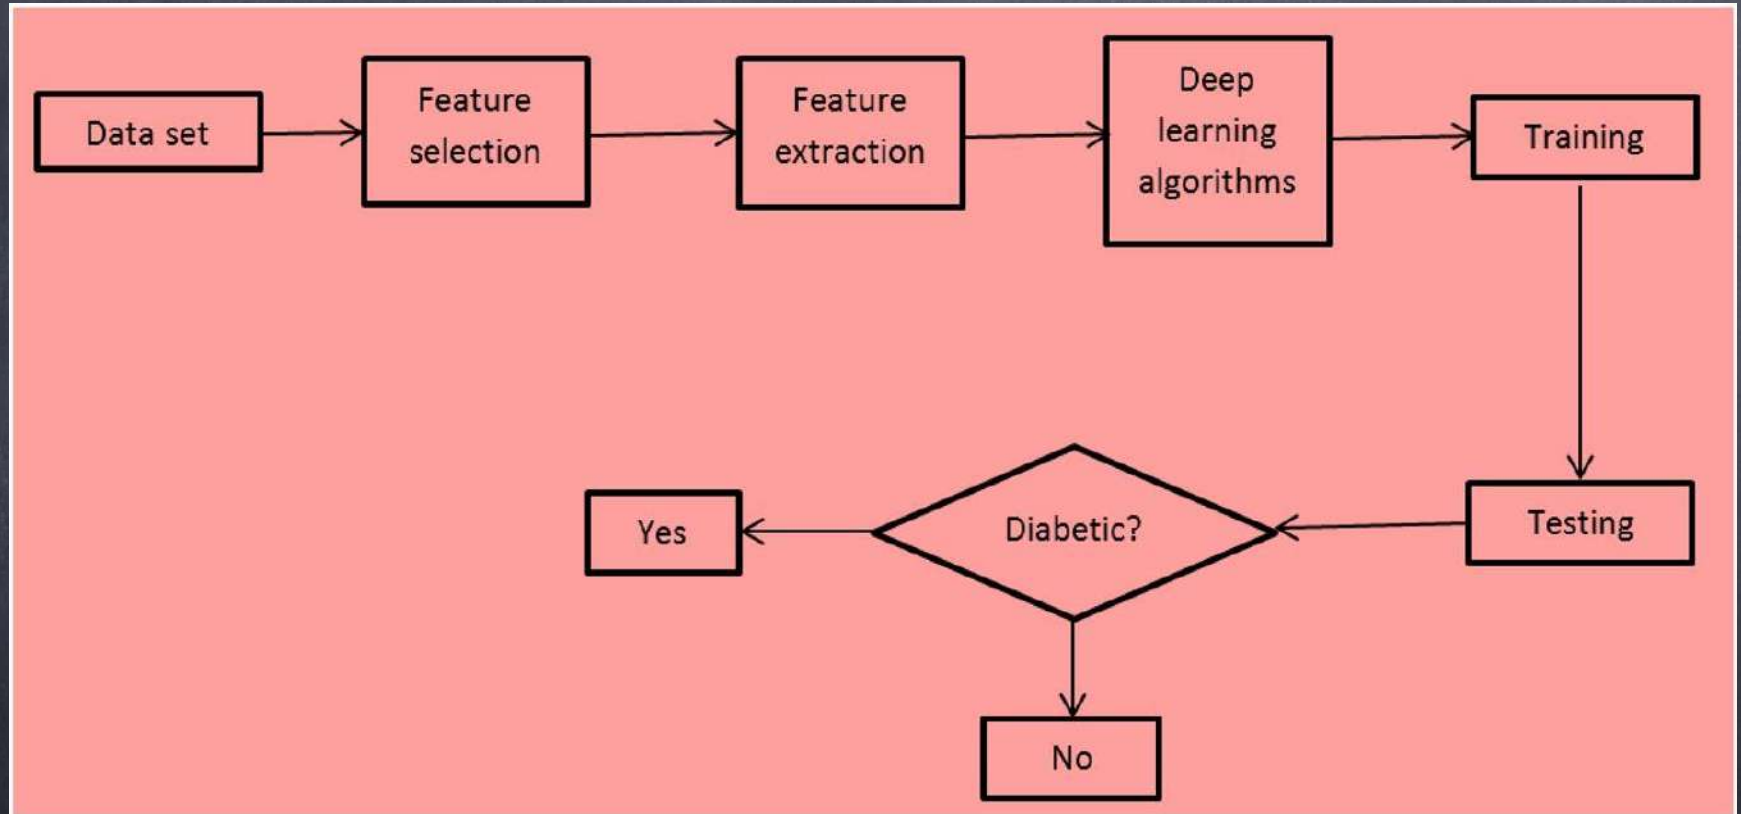

**14) Feedback and
Iteration**

**15) Scaling and
Expansion**
